

Safety Event Reporting SOP

SYNTHETIC DEMO · NOT FOR CLINICAL USE

PURPOSE AND SCOPE

This synthetic procedure describes how a fictional research site records and escalates safety events during a demonstration study. It applies only to the generated demo records packaged with this software.

SERIOUS EVENT ESCALATION

A serious adverse event in the fictional workflow must be escalated to the simulated medical monitor within 24 hours of site awareness. The initial report may be incomplete, but available facts and the participant identifier must be provided. Follow-up information is submitted promptly.

DOCUMENT CONTROL

The fictional quality team reviews this procedure every two years. Superseded controlled copies are retained for seven years in the demo archive. Printed copies are uncontrolled unless their status is verified against the current approved version.
